

Double Mirror Door With Special Hinge Design

***Upgrade Your MFC/MDF or Wooden Cabinet with
High Quality Double Mirror Door.***

Double-mirror door is regarded as high quality bathroom mirror doors used on bathroom cabinets, which enable a much more spacious feeling when you open your mirror cabinet, since the backside of the cabinet door is made of complete mirror as well. The production of the double mirror door requires much precision and technical knowledge.

Our Double-mirror door is

****** For Installation on MFC/MDF or Wooden Cabinets***

****** Special hinge design (patented) makes installation very simple and easy. It enables slight and precise adjustments of the door position after having fixed the mirror door on the cabinet.***

****** The door size and design can be adjusted according to customers wish.***

Our New Hinge Design (Patented)

Enables

- *** **Precise Adjustment** of the Mirror Door
- *** **Considerable Cost Reduction** compared to Blume or Heta Hinge
- *** **Enhanced Safety**

COMPARISON CHART

HINGE 1

– for aluminum cabinet only

HINGE 2

- For aluminum and MFC/MDF cabinet

NEW HINGE DESIGN

- For MFC/MDF Cabinet

DISADVANTAGES OF THE CLASSICAL HINGE DESIGN

*Hinge 1 is **only designed for aluminum or steel cabinet**, not for MFC/MDF or wooden cabinet, since the hinge and housing are combined together as one part.

*Hinge 2 can be used for both aluminum and MFC/MDF cabinet, the hinge is adhered directly on the mirror surface of the inside door. Disadvantage 1: it happens often that, that the door gets loose and fall up, since the hinge offers quite small surface to be glued on the door. Therefore **the safety is not guaranteed**.

Disadvantage 2: this kind of hinge is made in Europe only and the **price is very high** (like Blum or Heta).

ADVANTAGES OF OUR NEW HINGE DESIGN

*** The NEW Hinge is designed for double mirror door to be **installed on MFC/MDF or Wooden cabinet**.

*** **COST SAVING** -The new hinge design replaces classical hinge which is much more expensive.

*** **MORE SPACE** - As the hinge is not installed inside the cabinet, but out side of the cabinet on the top and bottom, you can use the cabinet inside space more flexible and have a spacious feeling when opening the cabinet.

*** **ENHANCED SAFETY** - The new hinge makes one part with the mirror door frame, on which the mirror door is adhered on. The aluminum door frame offers more surface to be glued on the mirror door. Therefore there is a enhanced safety level than the way how classical mirror door hinges are fixed on (compare above pictures)
